9498854130

Summary

- **B.Tech graduate in Artificial Intelligence and Data Science** with strong expertise in **Machine Learning, Deep Learning, Generative AI, Computer Vision, and Natural Language Processing** .
- Experienced in building AI models, optimization algorithms, and real-world AI systems. Recently worked as an **AI Engineer Intern at aXtrLabs**, contributing to **GenAI-based DigiRett AI Agent development**.

EDUCATION

- **Level of education**
  B.Tech – Artificial Intelligence and Data Science
  Karpagam College of Engineering, Anna University
  Expected Graduation: **2022-2026**
  CGPA: **7.56**
- **Level of education**
  HSC – CBSE
  PM Shri Kendriya Vidyalaya No.2
  Year: **2021-2022**
  Mark: 59%
- **Level of education**
  SSLC – CBSE
  PM Shri Kendriya Vidyalaya No.2
  Year: **2019-2020**
  Mark: 67%

SKILLS

- **Skills Category**
  - Programming Languages: Python, HTML, CSS.
  - AI / Machine Learning: Machine Learning, Deep Learning, Neural Networks (CNN, RNN, LSTM).
  - Generative AI & NLP: Text Embeddings, Semantic Search.
  - Tools & Platforms: Docker, Git, GitHub, Tableau, Oracle VirtualBox, Jupyter Notebook, Visual Studio Code, Google Collab.
  - Databases & Vector Stores:MySQL, MongoDB, Supabase, Milvus.

PROJECTS

- **DigiRett AI Agent(AI Engineer Intern – aXtrLabs)**
  - Developed the data ingestion pipeline for a RAG-based legal AI system to process Norwegian legal documents.
  - Built workflows to collect XML legal archives from the Lovdata API and convert them into structured legal text.
  - Implemented hierarchical token-based chunking and generated embeddings using Azure OpenAI (text-embedding-3-small).
  - Stored vectors in Milvus vector database and managed document metadata using Supabase for semantic retrieval.
  - Technologies: Python, Azure OpenAI, Milvus, Supabase, RAG Pipeline

- **Vehicle Routing Problem Optimization using Genetic Algorithm**
  - Developed a Python solution for solving Vehicle Routing Problem (VRP) using Genetic Algorithms.
  - Optimized multi-vehicle routes to reduce travel distance.
  - Achieved 30% cost reduction and improved delivery efficiency.
  - Technologies: Python, DEAP Library, NumPy, Matplotlib.

- **Dimensionality Reduction using K-Means and Gaussian Naive Bayes**
  - Built a classification pipeline for human activity recognition.
  - Improved model accuracy from 0.73 to 0.843 after dimensionality reduction.
  - Technologies: Python, Scikit-learn, K-Means, Naive Bayes.
  - Reduced model training time significantly.

Significant Roles

- **AI Engineer Intern** **Dec 2025 – Feb 2026 (2 Months)**
  aXtrLabs Pvt Ltd, Coimbatore
  - Contributed to the development of the ingestion module for the DigiRett AI Agent, enabling large-scale processing of Norwegian legal documents.
  - Designed workflows for efficient legal data preparation to support the RAG-based legal AI system.
  - Ensured data consistency, indexing readiness, and retrieval performance through structured ingestion strategies.
  - Collaborated with backend and AI teams to integrate vector search infrastructure and metadata systems.

EXPERIENCE

- **AI Engineer Intern – DigiRett AI Agent** **Dec 2025 – Feb 2026 (2 Months)**
  aXtrLabs Pvt Ltd, Coimbatore
  - Built ingestion pipelines to download and process XML legal archives from the Lovdata API.
  - Implemented document preprocessing and hierarchical token-based chunking for legal text.
  - Generated vector embeddings using Azure OpenAI and stored them in Milvus vector database.
  - Integrated ingestion workflows with Supabase for metadata storage and document tracking.
  - Automated ingestion execution using Python-based scheduling mechanisms**.**

Declaration

- I hereby declare that the above mentioned information is correct up to my knowledge and I bear the responsibility for the correctness of the above mentioned.
